

ABSTRACT OF THE DISCLOSURE

Compounds of the formula: $R^1 R^2 N-CH_2-CHO[(AO)_{m1} R^4]-CH_2-OR^3$ where R^1 is alkoxylated polyhydroxy hydrocarbyl; R^2 is as defined for R^1 , or hydrocarbyl, particularly alkyl or alkoxyalkyl, alkoxylated hydroxyalkyl, or a group: $-CH_2-CHO[(AO)_{m1} R^4]-CH_2-OR^3$; R^3 is hydrocarbyl; AO is alkyleneoxy; $m1$ is from 0 to 50; such that the average total number of alkyleneoxy groups in the molecule is from 3 to 50; and R^4 is hydrogen, or alkyl, are useful as agrochemical adjuvants. The agrochemical can be a plant growth regulator, herbicide, and/or pesticide, for example insecticide, fungicide, acaricide, nematocide, miticide, rodenticide, bactericide, molluscicide and/or bird repellent. Particularly useful formulations include water soluble herbicide(s), particularly such as glyphosate, glufosinate and paraquat.
